

ICS Patrol

Going Selectively Active for Comprehensive OT Visibility

Introducing a passively driven, active component for extended ICS device visibility and network intelligence

79%

of organizations with a SCADA/ICS network have suffered a breach in the past 24 months¹

— Forrester

The Challenge

OT cybersecurity stakeholders and ICS asset owners may have blind spots within their operation that a completely passive ICS cybersecurity solution cannot solve. Incomplete asset information and device visibility resulting from dormant and legacy ICS devices can leave networks exposed to elevated risk. Moreover, regulatory compliance tasks are resource intensive and prone to potential human error. OT asset owners demand detailed and contextual device data for enriched security posture analysis and a better means of supporting compliance efforts.

Passive Monitoring Capabilities

- Vendor Agnostic
- Plug and Play Capable
- Non-Intrusive Threat Detection
- Advanced Network Monitoring

PASSIVE

+

Active Monitoring Capabilities

- Extended Device Visibility
- Detailed Fingerprinting
- Compliance Task Automation

ACTIVE

=

SilentDefense™ with ICS Patrol™

- Identify and monitor dormant devices
- Automate compliance and reporting tasks
- Enrich device data for extended security posture analysis

BETTER TOGETHER

SilentDefense ICS Patrol

- Provides detailed asset inventory and device fingerprinting information such as installed patches, installed applications or open ports and services.
- Improves situational awareness of OT and ICS networks by providing detailed device operating status of dormant devices.
- Supports compliance and regulatory tasks with the automated gathering of relevant network data and performance indicators.
- Safeguards sensitive equipment by using ICS Patrol's OT-specific scanning policies.

ICS Patrol: The Best of Both Worlds

When combined with the completely passive SilentDefense sensor, ICS Patrol merges passive anomaly detection with active cybersecurity capabilities to non-intrusively extend ICS network visibility and operating intelligence. Provided as a separate, optional component in the form of a modular add on to SilentDefense, ICS Patrol is carefully driven by the passive system and selectively queries specific hosts based on one or more asset inventory characteristics. This enriches alert details with valuable contextual data of devices that otherwise may have been not visible. This added layer of visibility provides a more detailed asset inventory, comprehensive vulnerability and risk assessment, improved threat hunting capabilities and more efficient compliance with regulatory and internal standards.

Basic SilentDefense and ICS Patrol Deployment Model

ICS Patrol Use Cases

Network Discovery and Device Fingerprinting

ICS Patrol securely and selectively queries specific hosts on the ICS network to enhance asset visibility and provide more comprehensive inventories that include, but are not limited to, host status, OS version, manufacturer, software and applications, serial numbers, network user behavior and installed patches.

Comprehensive Risk and Vulnerability Assessment

A non-intrusive, automated process of collecting asset information allows cybersecurity stakeholders to evaluate risks and potential vulnerabilities in even greater detail. ICS Patrol enriches alert details with valuable contextual data that otherwise may have been not visible with a passive solution alone.

Easier Standards and Regulatory Compliance

The data collection and aggregation automation provided with ICS Patrol helps to reduce operating costs and lower the risk of incurring compliance violation fines under regulatory standards such as NERC CIP and the NIS Directive.
